Individual Mini Project Report

Static website with HTML5, CSS3 and Bootstrap

Dr. Alwan,
I just want to clarify that I worked on the entire website myself, including writing all the code and designing the pages. The project was not generated by AI.
I only used AI as a little help with writing the report (the word file). Everything related to building the website was done by me.
Thank you for your understanding.

Name	Ziad Abdullah Ahmed
ID	224113251
Course	Web Development (CSE211)

1. Website topic and purpose

Topic: Bean There Café – a website for a small neighborhood coffee shop.

Purpose: The site introduces the café to new visitors. It shows the atmosphere, lists the drinks and desserts with prices, tells the café's story, and lets people send a table reservation.

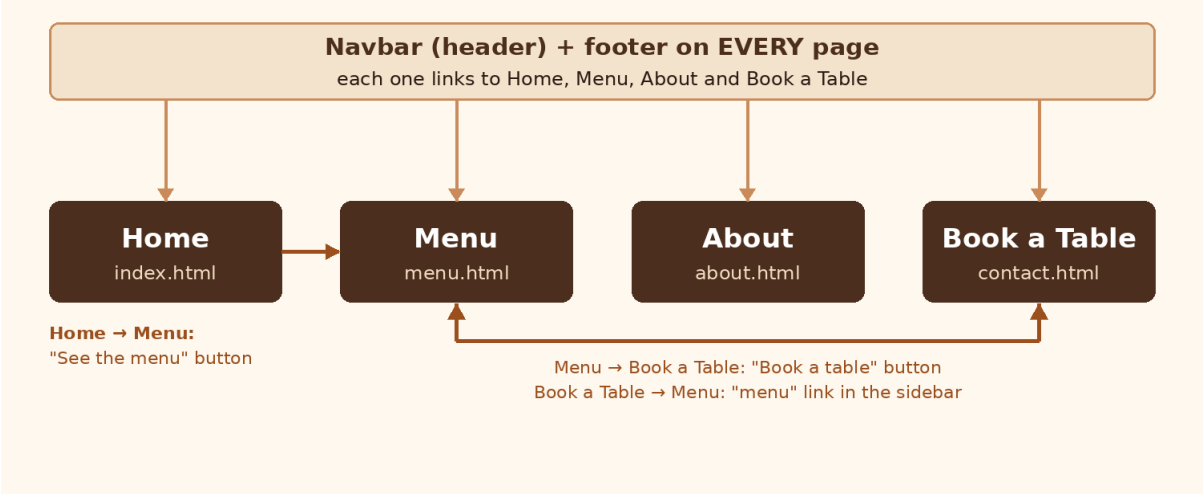

Why this topic: A café gives a natural reason to use every required element: a price table for the menu, an events table, a booking form with all input types, and a video and sound clip for the "take a look inside" section.

Technologies: HTML5, one external CSS file (css/style.css), and **Bootstrap 5.3**

Project files: `index.html, menu.html, about.html, contact.html, css/style.css, images/, media/`

2. Site map

The site has four pages. The navbar at the top and the footer at the bottom appear on every page, so each page links to all the others. A few extra links inside the page content are shown below.

Page	File	What it contains	Links out
Home	index.html	Hero banner, intro text, three feature cards, opening hours and specials	Navbar and footer to all pages; “See the menu” button to Menu
Menu	menu.html	Price table, top 3 drinks, good-to-know list	Navbar and footer to all pages; “Book a table” button to Book a Table
About	about.html	Story, breing steps, video and audio	Navbar and footer to all pages
Book a Table	contact.html	Booking form, weekly events table, address	Navbar and footer to all pages; “menu” link to Menu; email link (mailto)

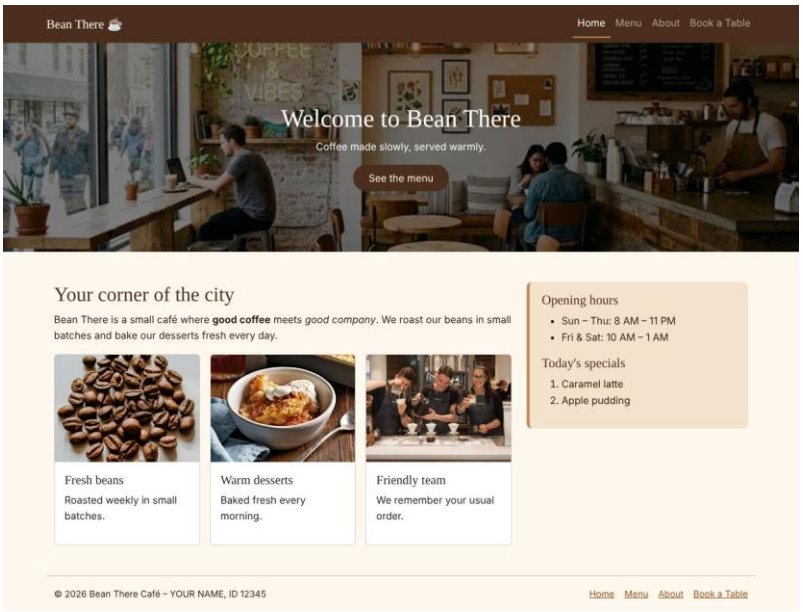

3. Screenshots

Each page is shown on a desktop screen and on a phone screen. On the phone the navbar collapses into a menu button and the columns stack vertically.

3.1 Home page (index.html)

Hero banner, intro, three cards (beans, desserts, team) and the opening hours sidebar.

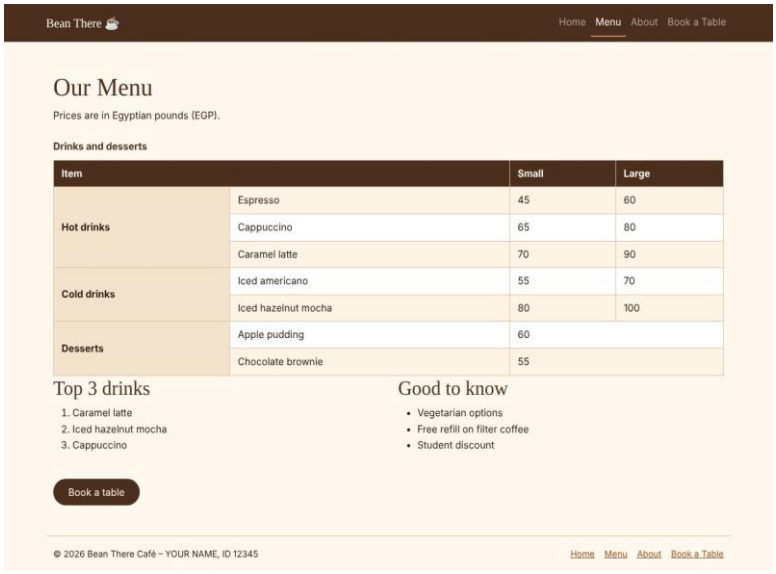

Desktop

3.2 Menu page (menu.html)

Price table with merged cells and two lists laid out with CSS.

Desktop

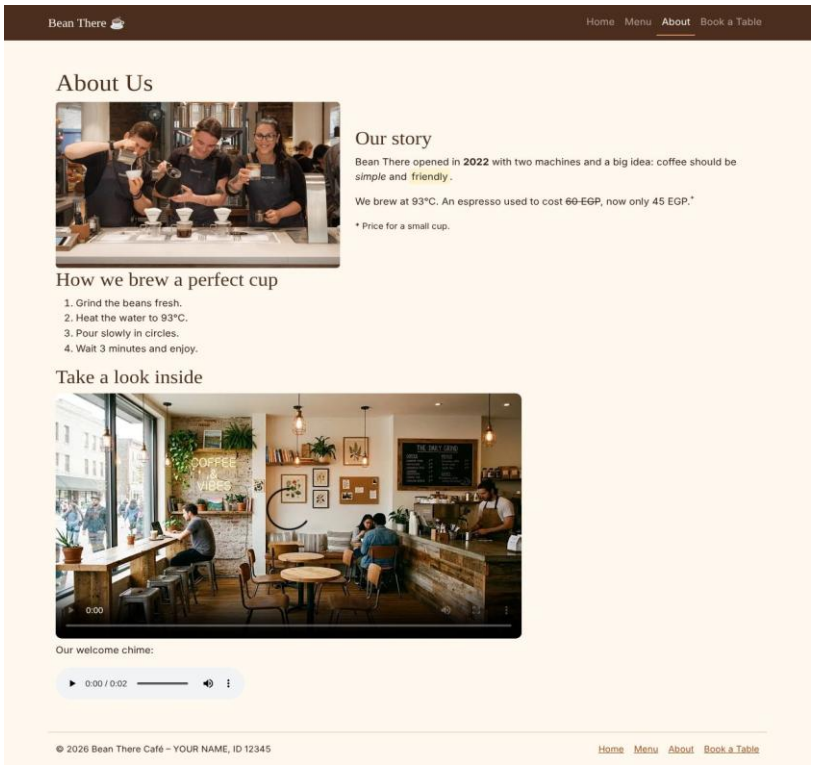

3.3 About page (about.html)

Story with team photo, brewing steps, and the video and audio players. There is a video on this page.

Desktop

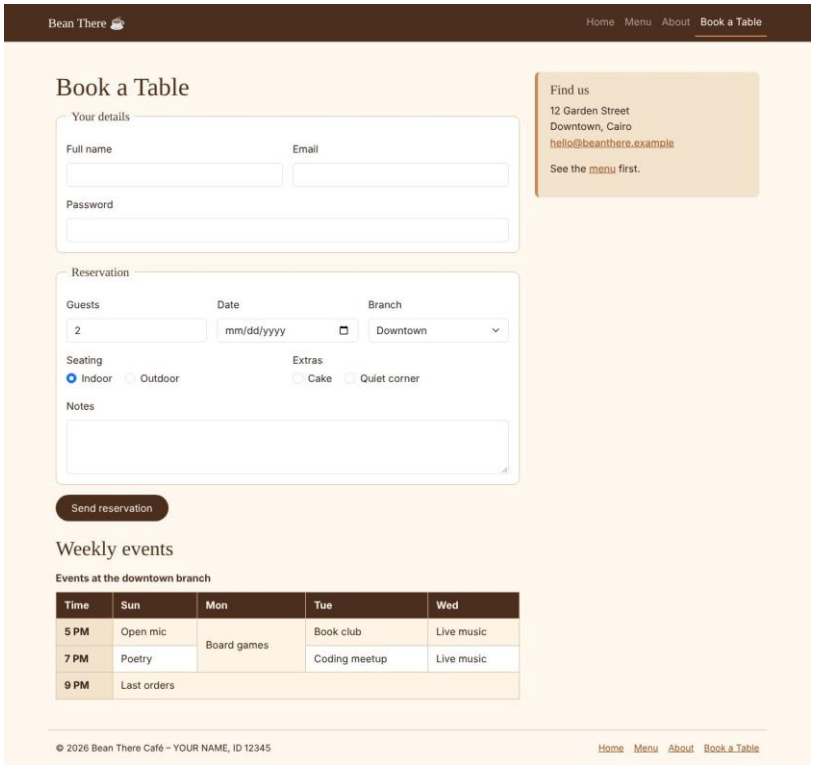

Phone

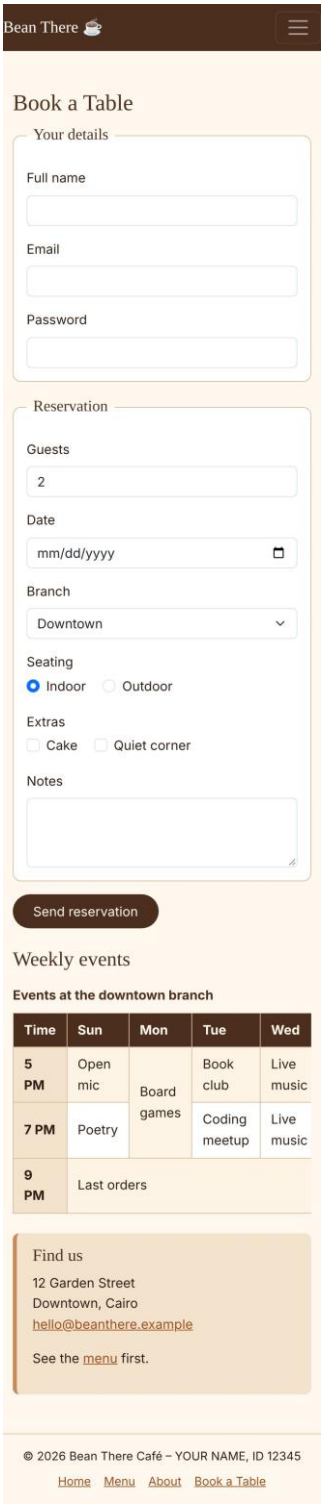

3.4 Book a Table page (contact.html)
Booking form with every input type, the weekly events table and the address sidebar.

Desktop

Phone

4. Where each HTML and CSS item is used

4.1 HTML – page structure

Item	Where it is used
Doctype	First line of all four pages: <!DOCTYPE html>
html, head, title	All pages. <html lang="en">, a <head>, and a different <title> on each page (for example “Menu | Bean There Café”).
Meta tags	All pages: charset, viewport and description.
header and nav	All pages: the header holds the Bootstrap navbar that links to the four pages.
main	All pages: wraps the main content.
section	index.html (intro and cards), menu.html (the two lists), about.html (story, brewing steps, video and audio).
article	index.html (the three feature cards) and menu.html (the two lists).
aside	index.html (opening hours and specials) and contact.html (“Find us” address box).
footer	All pages: copyright line and links to the four pages.

4.2 HTML – content

Item	Where it is used
Headings h1–h3	One h1 on every page, h2 for each section, h3 for the card titles on index.html.
Paragraphs	Every page (<p>).
Text formatting	strong and em in index.html and about.html; mark, del, sup and small in about.html.
Links	Navbar and footer on every page; “See the menu” and “Book a table” buttons; mailto: email link in contact.html.
Images	Three cards on index.html, team photo in about.html, poster image of the video. The hero banner photo is a CSS background.
Lists	Unordered: opening hours (index.html), “Good to know” (menu.html), navbar and footer. Ordered: today’s specials (index.html), top 3 drinks (menu.html), brewing steps (about.html).
Tables (colspan / rowspan)	menu.html price list: colspan on the “Item” header and the dessert prices, rowspan on the category cells. contact.html events table: rowspan on “Board games” and colspan on “Last orders”.
Audio and video	about.html: a <video controls> with a poster image and an <audio controls> player.

4.3 HTML – forms (contact.html)

Item	Where it is used
Text input	“Full name” field.
Email input	“Email” field.
Password input	“Password” field (minimum 6 characters).
Number input	“Guests” field (min 1, max 12).
Date input	“Date” field.
Radio buttons	“Seating”: Indoor or Outdoor.
Checkboxes	“Extras”: Cake and Quiet corner.
Select	“Branch” drop-down list.
Textarea	“Notes” box.
Submit button	“Send reservation” button. The inputs are grouped with fieldset and legend and each has a label.

4.4 CSS (css/style.css)

Item	Where it is used
One external CSS file	css/style.css is linked in the <head> of all four pages, after Bootstrap so it can override it.
Selectors	Element (body, a, header, footer), class (.hero, .sidebar, .btn-brand, .menu-table), grouping (h1, h2, h3), descendant (.hero h1, .menu-table th), universal (*) and :root.
Pseudo-classes	a:hover, .btn-brand:hover, input:focus, tr:nth-child(even), tr:first-of-type, .sidebar h2:first-child.
Colors	CSS variables --coffee, --latte and --cream on :root, used for text, borders and buttons.
Backgrounds	body, the .hero banner (gradient over a photo), .sidebar, table rows, fieldsets and buttons.
Fonts	Georgia for headings, Segoe UI / Arial for body text, plus font-size and line-height.
Box model	* { box-sizing: border-box }; padding and margin on .hero, .sidebar and fieldset; border and border-radius on .sidebar, tables and fieldsets.
Positioning	header { position: sticky; top: 0; z-index: 100 } keeps the navbar visible while scrolling.
Display	display: flex on the footer and its link list, display: grid on .two-col.
Flexbox	Footer and footer links (justify-content: space-between, gap, flex-wrap).
Grid	The .two-col block on menu.html uses grid-template-columns: 1fr 1fr with a gap.

Item	Where it is used
Media queries	@media (max-width: 768px): smaller hero, the two columns become one, and the footer stacks and is centered.

4.5 Bootstrap (bonus)

Bootstrap 5.3 is loaded from a CDN. It is used on top of my own CSS, not instead of it: the Flexbox, Grid, positioning, pseudo-classes and media queries above are all written in css/style.css.

Bootstrap feature	Where it is used
Grid system	row and col-* classes for the page layout (index.html, contact.html, about.html) and the form fields.
Responsive navbar	navbar-expand-md with a toggler button on every page.
Cards	The three feature cards on index.html (card, card-img-top, card-body).
Buttons	btn on “See the menu”, “Book a table” and “Send reservation”, restyled with my own .btn-brand class.
Styled form components	form-control, form-select, form-check and form-label in contact.html.
Helpers	table-responsive on the tables, img-fluid and rounded on the About image, spacing classes (my-5, g-3, g-4).
